

SECURITY SOLUTIONS

# Protection to help your business **stay in business**

Failing to protect your business against the high cost of downtime caused by unexpected natural disasters or malicious cyber-attacks can be disastrous to its chances of survival. Affecting both your employees and your customers, every second lost to disrupted services has the potential to negatively impact your business's finances and your brand's reputation.

New threats are continually evolving and the time to minimize and eliminate risk is now -- before your business is impacted. With multiple services to choose from, our Security Solutions provide the up-to-date resilience, recovery, and contingency needed to help your business stay in business.

## Stay Secure

Being online means being exposed to risk and not having the right solution can leave your business vulnerable. Altice Business SecureNet provides connectivity plus a choice of three all-in-one security packages designed to match your level of risk.

## Mitigate Risks

Keep your website available and protected with managed around-the-clock monitoring and expert technical support to quickly detect and mitigate DDoS attacks behind the scenes - without affecting user experience.

## Remain Reliable

Secure your data and your brand's reputation with Cloud Backup. Protect your business from hackers, hardware failures, and other data hazards. Create custom backup calendars and restore files with a click. We'll secure your data with military-grade encryption and 24/7 support.

## The benefits of proactive protection

How a company prepares for, reacts to, and recovers from a crisis speaks volumes to the people they serve. Our suite of Security Solutions was carefully designed to provide the resilience and reliable options needed for successful continuity and disaster recovery.

### Featured Security Solutions

**Altice Business SecureNet** provides all-in-one connectivity and security solution packages designed to match your level of risk.

**Managed DDoS Protection Service** provides 24/7, cloud-based, DDoS monitoring and automated attack mitigation
